Ahoy Mates,

I'm looking for a modulation transformer for a Morrow MB-560 or a junker 560. Much to my surprise and dismay, someone copped the mod transformer out of mine before I got my hands on it. Rather than hack it up to screen modulate it, I'd like to put it back to original. Have greenbacks and/or lots of goodies to trade.....choose your poison. Alternatively, I'll consider selling it to someone that restricts themself to strictly digital transmission (as in CW) provided I can't find a transformer.

Thanks and 73,

Subject: Gonset G66B Cabinet Color?
Mime-Version: 1.0
Content-Type: text/plain; charset="us-ascii"; format=flowed

Gang,

I've always like the chrome front panel on the little Gonset G66B mobile receiver, but most that I've seen are pitted and rusty. I finally found one (with matching AC supply) with a nice panel, but the cabinet looks terrible. It's been painted with what appears to be aluminum spray paint. I'd like to know what the original color is supposed to be -- e.g., blue hammertone, or what? Then I'll strip it down and start restoring it. The radio doesn't work on the HF bands, by the way. Buying radios that don't work seems to be the story of my life these days.

Gang-

This periodic post is intended to help subscribers whose email address has changed, preventing posting or receipt of the list.

If you change ISP (InterNet Service Provider), simply send me an email advising the change, and I will do my best to implement the change quickly.

For those unfortunates, whose ISP has made a change without advising their customers of the potential impact of that change on subscribers to email lists like the boatanchors, where one must be a subscriber to post to the list, try to follow along...

Under some circumstances, the changes to your email address are "transparent" to you, but prevent posting. I get error notification for these kinds of problems, and I try to work them out. However, I may miss one, and on this end, the process is anything BUT automatic.

You have a bigger stick than I do. You and your ISP have the primary responsibility to repair the problems caused by the change at the ISP. I have zero leverage with your ISP, and you have great leverage.

Most ISP maintain a customer service department to help with problems like these. This should be your first line of support for email problems. I am happy to assist and consult, but try to understand that when your ISP makes a change to their email handler, and that change prevents you from posting to the boatanchors list, I can help, but resolving this problem is your responsibility, working with your ISP. I am but a volunteer, contributing my time to administer the list.

Thank you for your attention.

I'm sure a lot of you remember Typetronics from way back. Fred N4TT is finally going to retire at age 92. He has LOTS of things other than teletype parts, a good tube and general parts stock and what have you. As the email says, might wanna get an regular order in right away, as he is still taking them - I'm sure he'll make you a VERY good deal on tubes and parts, and no, you won't have to buy a truckload. If you *DO* want to buy a truckload and want to pick it up, I'm sure he'll ask a reasonable price for that too. I've bought things from Fred on and off over the years, and he's always been a good guy to deal with.

I've no connection, etc. I'm just the messenger. If anyone on the list can or knows someone who might be interested in helping Fred liquidate at least the components and tubes, I'm sure it would be A Good Thing.

Content-Type: text/plain; charset="US-ASCII"
Content-Transfer-Encoding: 7bit

I am in the process of restoring an Elmac AF-67. Good output on CW and in the AM position as well but the modulation current creeps up from about the 25mil resting current to full scale but when I modulate the carrier the resting current drops back toward the 25 mil position. The output on the scope looks good even when the modulations current is rising or high. Could it just be that the meter shunt when reading the modulation is changing?

The output looks fine but the meter reading with no modulation creeps up quite high.

Any thoughts or suggestions?

My first guess would be leakage in the plate bypass caps
of the PA or modulator tubes.

You can usually find these at Radio Shack.
Pretty common.

Ken,

> Many thanks for the many replies. Now to find
> someone to shop for me or carry me to Radio
> Shack first & any other place if Radio Shack
> is out of stock.

I probably have 50 pounds of assorted CATV connectors in boxes, and don't have a single male-to-male. I'd absolutely call Radio Shack first. I used to engineer CATV and MATV systems, and all of my large amateur radio receiving systems here use F connectors. I still design gear using F connectors for a living. Male to male F connectors are very rare. While I'm not positive, I'd be VERY surprised if Rat Shack had them.

If you can use a short jumper with F's males on each end, I'd go that way. Short jumpers are available at Wally World and many other places.

Otherwise I'm pretty sure (not positive) you'll spend a lot of money and time looking for a male to male. If you could find an F male to F male adaptor rather than a jumper, I'd be very surprised.

Hi folks!

Many apologies...I opened up 2 topics (desirable BA tubes to save & EV shotgun mics FS) & left all hanging, both on this list & individually.

I had to make a long distance (out of country) move vry suddenly & haven't been able to get organized til now. (Moved 25 times in my adult life...enuf already!)

Many replied to my directly on these items. I had to leave the mics behind (but they got donated to a new church for their PA sys). I was able to take tubes with me, so ur input much appreciated & useful.

I've had fun catching up on 2 month's worth of BA list!

Tom,

I doubt that it is a meter shunt problem, but you could always put an external meter in either the 6L6 plate lead or cathode lead and find out. I would also look at the grid bias on the 6L6's. If it is dropping the plate current would go up. If you are still using a battery, it might be going bad. I use a zener diode in the cathode lead of the 6L6's and it works just fine.

Folks,

I've been lurking and watching this discussion go by, and I'm getting more interested.

I'm (a) on the East Coast, (b) able to go to Florida and fetch all of the stuff, (c) finicially able to make a complete purchase not too painful for Fred, and (d) trying to figure out what I'm going to do with myself after retirement in

about 5 years or so.

I'm thinking that Typetronics isn't a "business" in the sense of bringing in enough money to earn a living, but it'd be just fine as a retirement hobby/business. Do you think Fred would be interested in a discussion of what to do..? Any advice/thoughts on this, other than "Are you out of your MIND!?" ..? Anyone willing to share some thoughts on how to organize this for the best benefit of the 'community'?
Anyone willing to lend a hand with the physical part, should it come to that?

Hi Gang,

The MRCA (Military Radio Collector's Association) will hold its 5th annual meet on Friday & Saturday September 23 & 24 at the West End Fairgrounds in Gilbert, Pa. Again we will hold it along with the Red Ball Military Vehicle Show & Swapmeet. This is a very large vehicle show with an extensive swapmeet area.

We have the same excellent facilities that we have enjoyed during the past meets held at the fairgrounds.

Along with our own swapmeet we will have radio operating activities & presentations on military radio related subjects throughout the event.

Please visit our website at www.mrca.ar88.net
<<http://www.mrca.ar88.net>> for complete information.
Please note that this is a new address for our website.

Hope to see you there!!

73,

Subject: Some Hallicrafters factory manuals available

Content-Type: text/plain; charset=ISO-8859-1; format=flowed

Content-Transfer-Encoding: 7bit

I have a selection of factory Hallicrafters manuals that need a new home. I will part with them for the price of priority mail shipping which should be \$3.85.

operating and service instructions:

SX-101 Mark I

SX-101 Mark III (2 copies)

S-102 Mark I (2 copies)

Subject: Some Old Lafayette Catalogs need a New Home
Content-Type: text/plain; charset=ISO-8859-1; format=flowed
Content-Transfer-Encoding: 7bit

I have the following old electronics catalogs that need a new home. They are available for the cost of priority mail postage which should be \$3.85.

They are:

Lafayette catalog #650 1965

Lafayette catalog #690 1969

73,

Steve WA9JML

The Lafayette catalogs are spoken for.

That sure was quick!
